MICA FLAKES

At **Shiv Traders**, our Natural Mica Flakes are produced from carefully selected grades of high-quality ruby mica sourced from the Koderma region. These include varieties such as muscovite, phlogopite, biotite, clintonite, and others.

Mica Flakes serve as a key ingredient in pearlescent pigments and many specialized industrial applications.

During processing, the raw mica is thoroughly dried to eliminate moisture, then passed through multiple screening stages to remove dust. All unwanted materials—such as biotite pieces, quartz particles, organic fragments like straw or bamboo, and any other impurities—are hand-sorted with precision.

The purified mica is then sheared in high-efficiency pulvigator units and re-screened to achieve a consistent 2-8 mesh size, resulting in uniform, high-purity muscovite ruby mica flakes.

GRADE (AAA)

GRADE (AA)

GRADE (A)

Packaging: Available in HDPE, jute, or paper bags of 25 kg or 50 kg, or customized as per client requirements.

Minimum Delivery: 1 x 20' TEU container (approx. 20 tons).

MICA SCRAP — GRADE A

Our **Grade A Mica Scrap** comes directly from the mineral-rich belts of Koderma, Jharkhand, a region globally recognized for producing mica of excellent color, tensile strength, and superior electrical and thermal resistance.

This material performs exceptionally well under high-temperature calcination, often withstanding temperatures above 900°C, making it highly sought after for heat-resistant applications.

Processing involves hammer crushing, followed by systematic screening, producing clean, ready-to-use mica scrap that aligns with industry standards.

RUBY MICA SCRAP

GREEN MICA SCRAP

WHITE MICA SCRAP

Packaging: Typically packed in HDPE or jute bags, each weighing 50 kg.

Minimum Delivery: 1 x 20' TEU container (approx. 27 tons).

MICA FINE

These fine mica products are widely used in oil-well drilling, welding electrode manufacturing, and various specialized industrial processes.

The material is processed to a consistent **-40 mesh size**, ensuring excellent blendability and performance in demanding applications.

Mica Fine

MICA COARSE

Our **Mica Coarse** grade is valued for its high whiteness, grit-free texture, and stable performance in decorative materials, construction products, and fire-resistant compositions.

This product is screened to a controlled **8-20 mesh size** for uniformity and reliability.
